Reviews

Merely no words to clarify. I could comprehend every little thing using this created e pdf. I am just effortlessly could possibly get a enjoyment of reading through a created publication.
(Mr. Ari Powlowski)

WILDLIFE POPULATION GROWTH RATES

To read **Wildlife Population Growth Rates** PDF, remember to click the web link beneath and download the ebook or have accessibility to other information which are in conjunction with WILDLIFE POPULATION GROWTH RATES book.

Cambridge University Press, 2003. Softcover. Book Condition: New. First edition. What determines where a species lives? And what determines its abundance? This book takes a fresh approach to some of the classic questions in ecology. Despite great progress in the twentieth century much more remains to be done before we can provide full answers to these questions. The methods described and deployed in this book point the way forward. The core message of the book is that the key insights come from understanding what determines population growth rate, and that application of this approach will make ecology a more predictive science. Topics covered include population regulation, density dependence, the ecological niche, resource and interference competition, habitat fragmentation and the ecological effects of environmental stress, together with applications to conservation biology, wildlife management, human demography and ecotoxicology. Originally published as the collected papers of a Royal Society Discussion Meeting held at the Royal Society in London on 6 and 7 February 2002, this edition includes contributions from leading scientists from Australia, New Zealand, North America, Europe and the UK and has been provided with an extended introductory chapter and subject and author indexes. Contents List of contributors 1. Introduction to wildlife population growth rates 2. Population growth rate and its determinants: an overview 3. Demographic, mechanistic and density-dependent determinants of population growth rate: a case study in an avian predator 4. Estimating density dependence in time-series of age-structured populations 5. Pattern of variation in avian population growth rates 6. Determinants of human population growth 7. Two complementary paradigms for analysing population dynamics 8. Complex numerical responses to top-down and bottom-up processes in vertebrate populations 9. The numerical response: rate of increase and food limitation in herbivores and predators 10. Populations in variable environments: the effect of variability in a species` primary...
